

UNIFLOOR
SPORT
0 20" (5 mm)

- A unique construction featuring a .080" (2mm) homogeneous wear layer, .10" (2.5 mm) closed cell 100% vinyl foam cushioning for absorption of impact, and an intermediate .02" (.5 mm) thick PVC coated glass fiber stabilizing scrim for dimensional stability and superior indentation recovery. UN IFLOOR Sport-floor is heat seam welded,
- Wood splinters, warping, and sensitivity to surface moisture are eliminated.
- UNIFLOOR Sport has an installed cost significantly lower than maplewood gymnasium flooring.
- UNIFLOOR Sport passes basketball bounce test requirements and is ideal for most ball sports.
- Frictional properties of .55 per ASTM D-2047 are equal or superior to most wood gymnasium floor finishes. Skidding during play is minimized.
- Game marking lines are painted and can be added or relocated.
- Damages are easily repaired and become unnoticeable.
- Maintenance and cleaning by spot cleaning and dry buffing is found easier and less costly than for wood floors.
- Cushioning reduces fatigue and injury, and withstands street shoe traffic.
